

## **ERASMUS POLICY STATEMENT**

### **Participation in Erasmus+**

Participation in Erasmus+ programme is an opportunity to broaden the scope of our activities and also to teach students from all over the world. We want our current students to have an opportunity to learn about the culture of other nationalities which may change the way they think and act and will also influence their intellectual development.

We want to exchange experiences with other universities in order to ensure the highest quality in our educational process and to systematically improve the curriculum content and teaching methods.

We are committed to education based on the principles of humanism, democracy, equality and inclusion, and to popularising science in local, national and international environments.

Our plans include efforts and activities within Key Action 1: Mobility of Individuals such as mobility of students for studies, apprentices and internships and also mobility of staff for training purposes.

The role of coordinator will be assigned to our Chancellor who already has experience in collaborating with foreign institutions. As part of her activities, lectures have been held in recent years for students with representatives of a German company on Polish-German cooperation. We have also established cooperation with a Paris university in order to exchange experiences.

### **Strategy, objectives and impact**

Our University aspires to be a universal university in accordance with the Bologna Process and the Lisbon Strategy. We are open to new educational challenges and wish to promote the idea of modern teaching. We believe that participation in the ERASMUS + programme would allow us to meet the above assumptions.

Our University also carries out activation and educational projects. We help the unemployed to improve their competences and qualifications. We also provide training for a wider audience, such as language, computer and accounting courses, which are also attended by our employees. We are therefore open to new challenges and solutions.

The main objective of the University is to impart knowledge and practical skills, in a friendly environment, ensuring that the graduates achieve successes that enhance the prestige of the University.

Participation in the ERASMUS + programme would allow us to achieve our objectives by:

- implementing curricula closely linked to the needs of the labour market, adapted to European standards, through international cooperation,

- increasing the didactic potential and attractiveness of the educational offer, by exchanging experiences between universities from all over the world. Mobility of employees for training purposes will increase their social, linguistic and cultural competences, which will have a positive impact on their work quality.

## **Indicators**

The Coordinator will oversee the implementation of tasks in accordance with the Erasmus+ programme and present the University's activities towards development at the semi-annual Senate meetings.

On the basis of the inter-university experience gathered, study programmes will be discussed and analysed at Senate meetings with a view to improving them.

The quality of education is verified on the basis of questionnaires filled in by students. After joining the ERASMUS+ programme we will verify whether the level of education in the opinion of students has actually increased.
